

## INTRODUCTION OF A NEW BIOCOMPATIBLE LIQUID CHROMATOGRAPHY DEVICE DEDICATED TO MICRO-PURIFICATION: THE ÄKTAPURE MICRO

J.P. BOURSIER<sup>1</sup>

<sup>1</sup>Cytiva - Velizy Villacoublay (France)

The purification of small amounts of proteins of the order of  $\mu\text{g}$  has always been a challenge, the low expression, the difficulty of obtaining the natural source containing the protein are all sticking points. It is for this reason that scientists have developed recombinant proteins but also in parallel more efficient purification systems making it possible to manipulate a few  $\mu\text{g}$  of proteins of interest. The advent of recent technologies such as the Cryo EM or the MALS have revived the interest in using such micropurification systems, it is in this context that we are pleased to offer a new biocompatible liquid chromatography system, the ÄKTA™ Pure micro and the associated columns designed for micro-purification of proteins and biomolecules.
